

## **STRUCTURAL ENGINEER**

Magryn & Associates is a medium sized consultancy firm based out of the Adelaide CBD in Somerton Park, which makes us only 800m from the beach! We have been in business since 1994 and have a wide variety of long standing clients in various state and local governments, industry and the general public. Quality engineering that is valued by our clients is our focus.

We undertake design and investigation of engineering structures and facilities in the disciplines of coastal, mining, structural and civil. This allows us to provide a broad range of professional development opportunities to our engineering team through the diverse projects that we undertake. Some of the projects you may be involved in include:

- the inspection of existing structures in and above the water (don't worry – we will provide you with a dive team for the underwater inspection if it's too deep)
- the design of buildings
- the design of tensile shade structures
- the design of boat ramps and breakwaters
- forensic inspection and reporting on building problems, including cracking and leaking/damp issues

The position is mainly office based with site visits across the state and Australia as needed. A current driving licence is essential, and a boat licence would also be useful.

We support and encourage our engineers to achieve their full potential through on the job training and obtaining Chartered Professional Status through Engineers Australia. We pay above award salaries, with all the normal leave and superannuation entitlements.

We are seeking a permanent, full time Structural/Civil Engineer to join our team. The successful applicant must have:

- Degree qualifications in Structural and Civil Engineering, and eligible to apply for Chartered Status with Engineering Australia
- Preferably 3 or more years' experience as an engineer
- Excellent written and verbal communications skills, as you will be liaising with clients and other professionals on a regular basis
- An ability to work autonomously but also to collaboratively work within a high performing team environment
- Very good analytical skills in structural engineering and experience in microstran or spacegass analysis packages
- Good computer skills
- Good familiarity with the relevant Australian Standards and building practices

All of our engineers are expected to liaise with clients directly and run multiple projects at any one time. If appropriate to your skill level, you may also be required to supervise junior engineers, drafters and technical officers.

The position would suit an engineer with a few years of experience, looking to move to a quality engineering consultancy that offers good staff support and a relaxed but professional atmosphere.

All candidates should be based in Adelaide or willing to relocate here at their own cost. Unfortunately, no sponsorship is available.

We are looking for an engineer who can start early in 2021.

Magryn & Associates promotes a workplace that actively seeks to include, welcome and value unique contributions of all people. We encourage people with disability, Aboriginal Australians and people from culturally diverse backgrounds to apply for this job.

Further information about Magryn & Associates is available on our website:  
[www.magryn.com.au](http://www.magryn.com.au).

Please email us a full CV and copy of your university qualification to  
[admin@magryn.com.au](mailto:admin@magryn.com.au).

Please be assured that all applications will be treated with the utmost confidence and discretion.
